

Student t(3), $g(x) = |x|$
 128 independent replicates; target mean = 1.10266

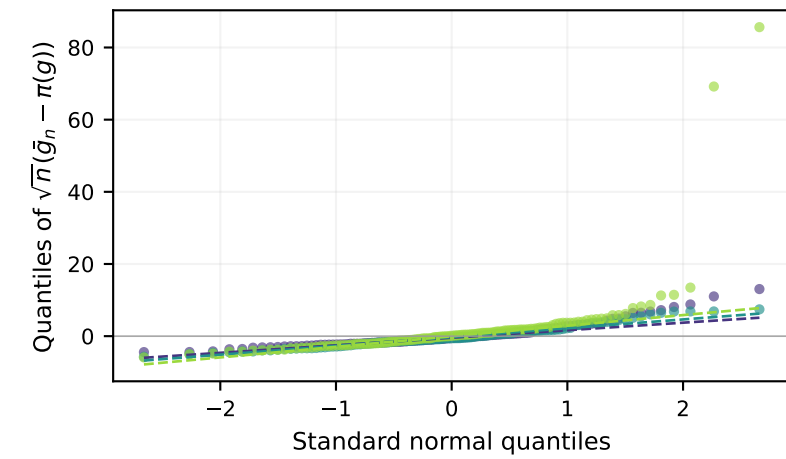

i.i.d. reference

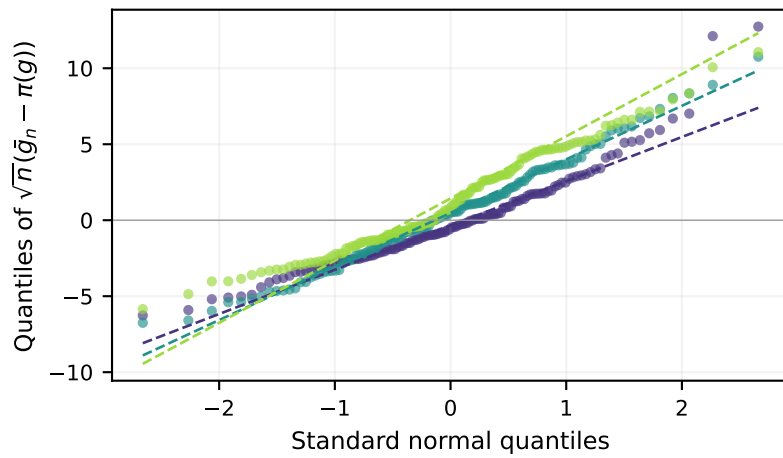

ULA

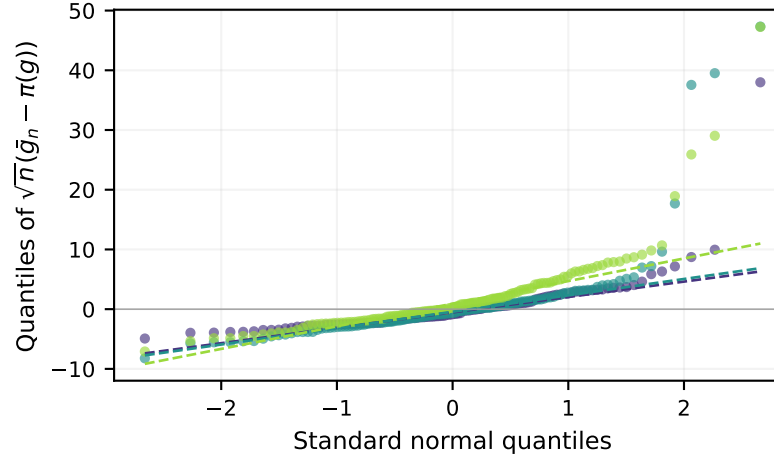

Unadjusted HMC, L=5

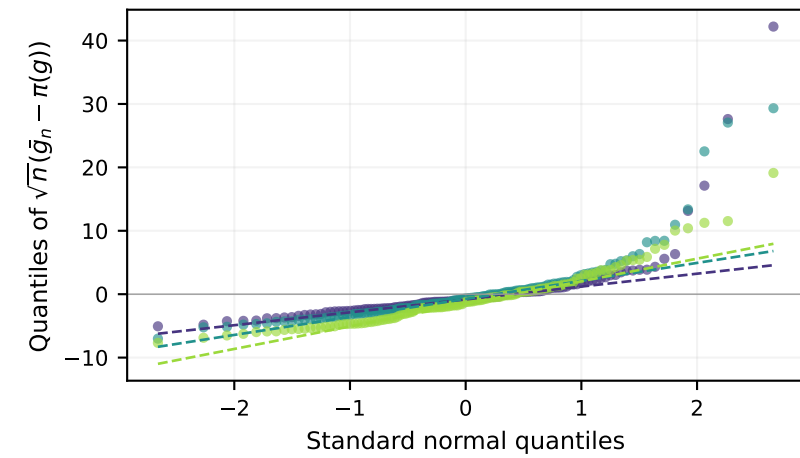

Unadjusted HMC, L=10

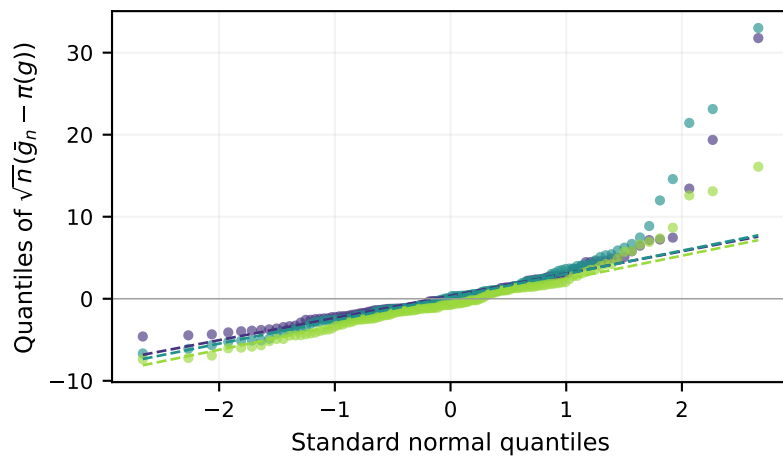

Unadjusted HMC, L~Unif[1,10]

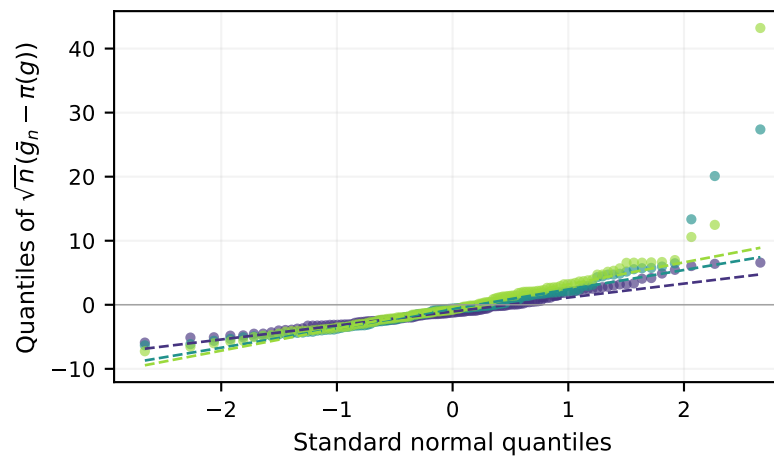

MH-HMC, L=5

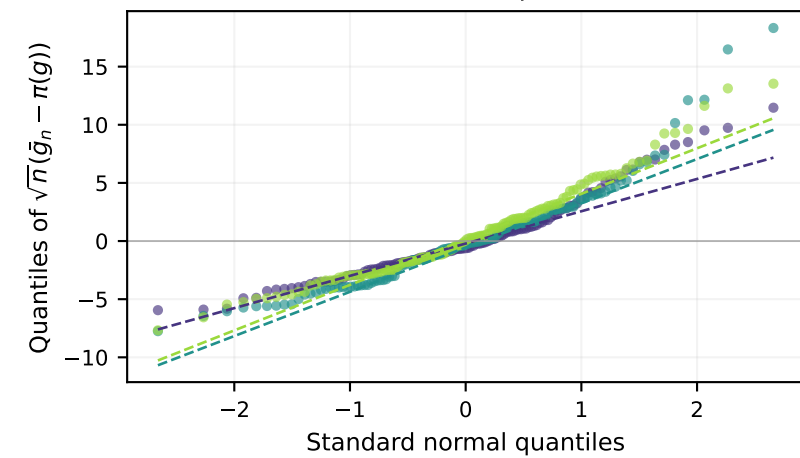

MH-HMC, L=10

MH-HMC, L~Unif[1,10]

NUTS, max depth=7

Dashed: normal line through each sample's quantiles. Axes vary by sampler.
 ULA / unadjusted HMC may be shifted by discretization bias. Finite-run QQ plots do not prove CLT failure.
